Sequence 134, Application US/09249247

Patent No. 6593305;

GENERAL INFORMATION:

APPLICANT: WAGHT, Jim A.

APPLICANT: WIGHT, Jim A.

TITLE OF INVENTION: Antitumor Antisense Sequences Directed Against R1 and TITLE OF INVENTION: R2 Components of Ribonuclectide Reductase

TITLE OF INVENTION: R2 Components of Ribonuclectide Reductase

TITLE OF INVENTION: R2 Components of Ribonuclectide Reductase

TITLE OF INVENTION: NAMBER: US 60/023,040

EARLIER PILING DATE: 1996-08-02

EARLIER FILING DATE: 1997-08-02

EARLIER FILING DATE: 1997-08-01

NUMBER OF SEQ ID NOS: 220

Sequence 6450, Application US/08584040

Patent No. 6346398
GENERAL INFORMATION:
APPLICANT: Pavco, Pamela
APPLICANT: Bacobedo, James
APPLICANT: Escobedo, James
APPLICANT: Escobedo, James
TITLE OF INVENTION: TREATMENT OF DISEASES OR
TITLE OF INVENTION: OF VASCULAR ENDOTHELIAL
TITLE OF INVENTION: ALVORESPENDENCE ADDRESS:
ADDRESSE: LYON & LYON
STREET: 633 West Fifth Street
STREET: SALIC 4700
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             STREET: SULLE #, voc

; Patent No. 6346398
; GENERAL INFORMATION:

GENERAL INFORMATION:

APPLICANT: Pavco. Pamela

APPLICANT: Stinchcomb, Dan T.

APPLICANT: Stinchcomb, Dan T.

TITLE OF INVENTION: METHOD AND REAGENT FOR THE

TITLE OF INVENTION: TREATMENT OF DISEASES OR

TITLE OF INVENTION: CONDITIONS RELATED TO LEVELS

TITLE OF INVENTION: GROWTH FACTOR
CURRENT APPLICATION NUMBER: US/09/371,772B
CURRENT FILING DATE: 1999-08-10
PRIOR APPLICATION NUMBER: US 60/005,974
PRIOR FILING DATE: 1995-10-26
PRIOR FILING DATE: 1996-01-08
NUMBER OF SEQ ID NOS: 14225
SOFTWARE: PATENTIN version 3.0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  16.4%;
                                                                                                                                                                                                                                                                                                                                16.4%;

; Sequence 1874, Application US/08584040
; Patent No. 6346398;
GENERAL INFORMATION:
APPLICANT: Pavco, Pamela
APPLICANT: Stinchomb, James
APPLICANT: Stinchomb, Dan T.
APPLICANT: Escobedo, Jaime
TITLE OF INVENTION: METHOD AND REAGENT FOR THE
TITLE OF INVENTION: TREATMENT OF DISEASES OR
TITLE OF INVENTION: CONDITIONS RELATED TO LEVELS
TITLE OF INVENTION: GROWTH PACTOR
NUMBER OF SEQUENCES: 8502
CORRESPENDENCE ADDRESS:
ADDRESSEE: Lyon F.T.

PRIOR FILING DATE: 1996-01-08
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence 4, Application US/09529812A
Sequence 4, Application US/09529812A
Patent No. 668230
GENERAL INFORMATION:
THILE OF INVENTION: NEW TRIPLEX FORMING OLIGONUCLEOTIDES AND THEIR USE IN TITLE OF INVENTION: ANTI-HBV
CURRENT APPLICATION NUMBER: US/09/529,812A
CURRENT FILING DATE: 2000-07-24
PRIOR APPLICATION NUMBER: CT/CN98/00248
PRIOR FILING DATE: 1998-10-19
PRIOR FILING DATE: 1997-10-21
NUMBER OF SEQ ID NOS: 18
SOCTWARR: PATENTIN Ver. 2.1
SEQ ID NO 4
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  TYPE: DNA
ORCANISM: Artificial Sequence
ORCANISM: Artificial Sequence
FEATURE:
OTHER INFORMATION: Description of Artificial Sequence: Triplex
OTHER INFORMATION: forming oligonuclectide
OTHER INFORMATION: This oligo may or may not be 3'-monophosphorylated

Sequence 154, Application US/09167109

Patent No. 639227

GENERAL INFORMATION:

APPLICANT: Baker, Brenda F.

APPLICANT: Cowsert, Lex M.

APPLICANT: Monia, Brett P.

APPLICANT: XU, Xiaoxing S.

TITLE OF INVENTION: ANTISENSE MODULATION OF TRAF EXPRESSION
                                                                                               APPLICANT: Lex M. Cowestt
APPLICANT: Lex M. Cowestt
APPLICANT: Lex M. Cowestt
APPLICANT: Ser M. O'Malley
TITLE OF INVENTION: ANTISENSE MODULATION OF SRA EXPRESSION
FILE REPRENCE: RTS-0048
CURRENT APPLICATION NUMBER: US/09/280,409
CURRENT FILING DATE: 1999-03-29
NUMBER OF SEQ ID NOS: 146
SEQ ID NO 72
LENGTH: 18
                                                                                                                                                                                                                                                                                                                                                                                                                                                 ; FEATURE:

MOLECULE TYPE: Genomic DNA
DESCRIPTION: retinoblastoma gene (Accession #
DESCRIPTION: M33647, J02994) nucleotides 2236 to 2247
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Deletions of a DNA sequence
in retinoblastomas and mesenchymal tumors:
Organization of the sequence and its encoded
                                                                                                                                                                                                                                                                                          RESULT 112
US-08-173-489C-85/c
US-08-173-489C-85/c
Sequence 85, Application US/08173489C
Patent No. 5861244
GENERAL INFORMATION:
APPLICANT: WANG, C. -G.
TITLE OF INVENTION: GENETIC SEQUENCE ASSAY USING DNA TITLE OF INVENTION: TRIPLE-STRAND FORMATION.
NUMBER OF SEQUENCES: 365

Sequence 19, Application US/08501356

Patent No. 5814620

GENERAL INFORMATION:
APPLICANT: Robinson, Gregory S.
APPLICANT: Smith, Lois E.H.
TITLE OF INVENTION: Inhibition of
TITLE OF INVENTION: VEGF-Specific
TITLE OF INVENTION: VEGF-Specific
TITLE OF INVENTION: Oligonuclectides
NUMBER OF SEQUENCES: 53
CORRESPONDENCE ADDRESS:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     CORRESPONDENCE ADDRESS:

US-928-465-9/C
IS-69-928-465-9/C
| Sequence 9, Application US/08928465
| Patent No. 6204024
| GENERAL INFORMATION:
| APPLICANT: Lee, Eum Mi
| TITLE OF INVENTION: Amplification Based
| TITLE OF INVENTION: Amplification Assay
| NUMBER OF SEQUENCES: 10
| CORRESPONDENCE ADDRESS:
| ADDRESSE: AACO NO. 6204024el Patent Department
| STREET: 1300 Piccard Drive
| CITY: Rockville
| STRATE: Maryland
| CONTRY: US
                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Hepatitis B virus genome (subtype ayw) cloned in E coli
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            RELEVANT RESIDUES IN SEQ ID NO: 167 :FROM 1 TO 16 US-08-173-489C-167
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           COMPUTER READABLE FORM:
MEDIUM TYPE: Floppy disk
COMPUTER: IBM PC compatible
COMPUTER: SYSTEM: PC-DOS/MS-DOS

; Sequence 15, Application US/09479770A

; Sequence 15, Application US/09479770A

; Patent NO: 6391555

; GENERAL INFORMATION:

APPLICANT: Johnson, Eric S.

; APPLICANT: Johnson, Assay for the Detection of Avian Leukosis/Sarcoma

ITLE OF INVENTION: Assay for the Detection and Animal Biological Speci
Patent No. 6391555

GENERAL INFORMATION:
APPLICANT: Johnson, Eric S.
TITLE OF INVENTION: Assay for the Detection of Avian Leukosis/Sarcoma
TITLE OF INVENTION: Assay for the Detection of Avian Leukosis/Sarcoma
Viruses (ALSV) in DNA from Human and Animal Biological Speci
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             NUMBER OF SEQUENCES: 15

Sequence 31, Application US/08192946
Patent No. 628688
GENERAL INFORMATION:
FAPLICATT: KENNETH G. DRAPER
TITLE OF INVENTION: METHOD AND REAGENT FOR
TITLE OF INVENTION: INHIBITING INFLUENZA VIRUS
TITLE OF INVENTION: INHIBITING INFLUENZA VIRUS
TITLE OF INVENTION: MEDICATION
NUMBER OF SEQUENCES: 32
CORRESPONDENCE ADDRESS:
ADDRESSEE: Lyon & Lyon
STREET: 611 West Sixth Street
CITY: Los Angeles
STATE: California
COUNTRY: USA
ZIP: 90017
COMPUTER: 15 Diskette, 1.44 Mb storage
COMPUTER: 18M compatible
COMPUTER: 18M COMPATE: NOTGREFECT (Version 5.0)
CURRENT APPLICATION NUMBER: US/08/192,946
FILING DATE:
CONTROPTION NUMBER: US/08/192,946
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               FILLING DATE:
